SUMMARY

Full-stack and AI engineer in Year 2 of a B.Tech in Computer Science. Founded AnserTech, a production AI business-automation platform with a real-time voice AI pipeline running at sub-500ms latency, built and maintained solo. Shipped four products covering voice AI, RAG pipelines, multi-agent systems, and serverless mobile. Looking to join an early-stage or growth-stage team where I can take ownership of backend systems from day one.

EXPERIENCE

Founder and Lead Engineer, AnserTech

2024 - Present

Python, Django REST Framework, FastAPI, Next.js, WebSockets, Voice AI | ansertech.com

- Built a real-time voice AI pipeline from scratch: bidirectional audio processing (ulaw to PCM), sub-500ms latency, and a call handling architecture supporting 100 concurrent sessions.
- Secured the pipeline with HMAC-validated webhooks and dual session ID mapping; built a credit-based buffer manager to control LLM API costs across concurrent calls.
- Built the backend in Django REST Framework covering AI customer interaction flows, scheduling automation, and an analytics dashboard; built the frontend in Next.js for both business owners and end users.
- Deployed the platform to production and currently onboarding first clients. Handled architecture, development, deployment, and client onboarding as a solo founder.

PROJECTS

Contextia AI

2024

Next.js, Django REST Framework, RAG, pgvector, Supabase | [GitHub](#)

- Built an AI content generation system that takes PDFs, URLs, and raw text as input and produces formatted content for 5 platforms including LinkedIn, YouTube scripts, and email newsletters.
- Implemented a RAG pipeline on Supabase (PostgreSQL with pgvector) for semantic search across document corpora; used a multi-agent async architecture to reduce generation time compared to single-agent processing.

Archonix

2024

Django, Next.js, Celery, Redis, WebSockets, PostgreSQL | [GitHub](#) | [Live](#)

- Built an AI code generation platform that takes natural language prompts and outputs working web applications using a multi-model architecture.
- Used Django Channels for real-time progress tracking over WebSockets and Celery with Redis for async task queuing. Deployed on Vercel with Pytest-based test coverage.

Guidey

2024

React Native (Expo), Hono.js, Cloudflare Workers, D1, Vectorize, GROQ, NVIDIA NIM

- Built an AI micro-learning mobile app that organizes short YouTube videos into structured learning paths. Used Cloudflare Vectorize to track topic progress and adapt content sequencing per user.
- Built the entire backend on Cloudflare Workers using Hono.js, D1 for storage, and KV for caching. Quiz generation runs on NVIDIA NIM and GROQ with Google OAuth for auth. No server to manage.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, C, Java
Backend: Node.js, Express.js, Django REST Framework, FastAPI, Hono.js (REST APIs, WebSockets, Auth)
Frontend: Next.js, React.js, React Native (Expo), TailwindCSS
Databases: PostgreSQL, Redis, SQLite (Cloudflare D1), pgvector, Qdrant
AI / ML: LangGraph, RAG Pipelines, Multi-Agent Systems, Voice AI, LLM APIs (OpenAI, GROQ, NVIDIA NIM), Vector Databases
Infrastructure: Docker, Celery, Cloudflare Workers/KV/Vectorize, Supabase, Git, GitHub

EDUCATION

B.Tech, Computer Science and Engineering, Dr. Lankapalli Bullayya College of Engineering
Aug 2024 - May 2028 | GPA: 7.85/10 | Data Structures and Algorithms, Operating Systems, DBMS, Computer Networks, OOP

LEADERSHIP

- Founder and Lead, Moon Phoenix: student developer community at Dr. LB College of Engineering. Runs technical bootcamps and hackathons to build engineering culture on campus (2024 - Present).
